IRC is a global network of scientists engaged in research of atmospheric radiation and related disciplines. Founded in 1896, IRC is the oldest of the ten commissions of IAMAS (International Association of Meteorology and Atmospheric Sciences) and is currently comprised of experts from 18 countries working in universities, research institutions, government agencies and private industry. The Commission coordinates research, guides priorities, and supports international cooperation and collaboration. IRC also organizes scientific symposia open to all scientists that provide forums for the scientific community to present, discuss and promote the latest achievements in atmospheric radiation science.
